

Liquefied Natural Gas: LNG

Ledwood was crucial to the success of constructing the UK's first three enormous LNG import terminals: South Hook LNG, Dragon LNG, Isle of Grain LNG.

Responsibilities typically included the detail design during construction and supply, fabrication and construction of structural steel, pipework for separate tank and jetty packages. Upon completion, Ledwood supported the commissioning phase.

Ledwood's success at South Hook led to complete responsibility for all mechanical works within the process area, which is a testament to the skill, experience and diligence of the Ledwood team.

- ✓ Specific Welding Procurement qualified to -196°C
- ✓ Specialised Purging techniques up to 250 metres away from any open end. Clean build procedures leaving no undue residue
- ✓ Specialised teams installing – High pressure Send out Pumps, Submerge Combustion Vaporisers, Boil off Gas Compressors, Loading Arms, Jetty Related Works
- ✓ Term maintenance contracts
