

Marine Energy

Ledwood has the facilities, expertise and ideal location to fabricate complete systems and secondary steelwork for the Marine Energy industry. Over Ledwood's 40 years of existence, the company has built a number of structures for the offshore industry and these skills have been transferred to marine renewables.

The company has already built a prototype wave reactor and is superbly placed to build renewable energy devices to be deployed on our doorstep in the Celtic Sea or beyond. Completed structures can be shipped to sea directly from our quayside.

- ✓ Detail Design
- ✓ Structural & secondary steelwork
- ✓ Electrical & instrumentation installation & testing
- ✓ Marine coatings
- ✓ Testing & precommissioning
- ✓ Load out from Ledwood quay
